

於陸蟹釋幼期間 5月1日-9月30日 19-22PM道路封閉。

During the land crab hatching season (May 1 to September 30), the road will be closed daily from 7:00 PM to 10:00 PM.

小琉球是台灣珍貴的陸蟹棲息地，擁有超過20種陸蟹，包括毛足特氏蟹、毛足陸方蟹及紫地蟹，其中紫地蟹數目最多。

每年繁殖季，抱卵雌蟹會集體降海釋放幼體。這個「降海潮」需穿越馬路前往海邊，卻因車流頻繁遭路殺。

自2013年起，當地志工自發夜間調查與標記陸蟹，希望保育族群，平衡觀光與生態。雖然近年數量減少，仍有機會復育。小琉球，有望成為「紫色陸蟹天堂」

Xiaoliuqiu is a precious habitat for land crabs in Taiwan, home to over 20 species, including Tuerkayana hirtipes, Chiromantes haematocheir, and Geothelphusa purplea, with the latter being the most abundant.

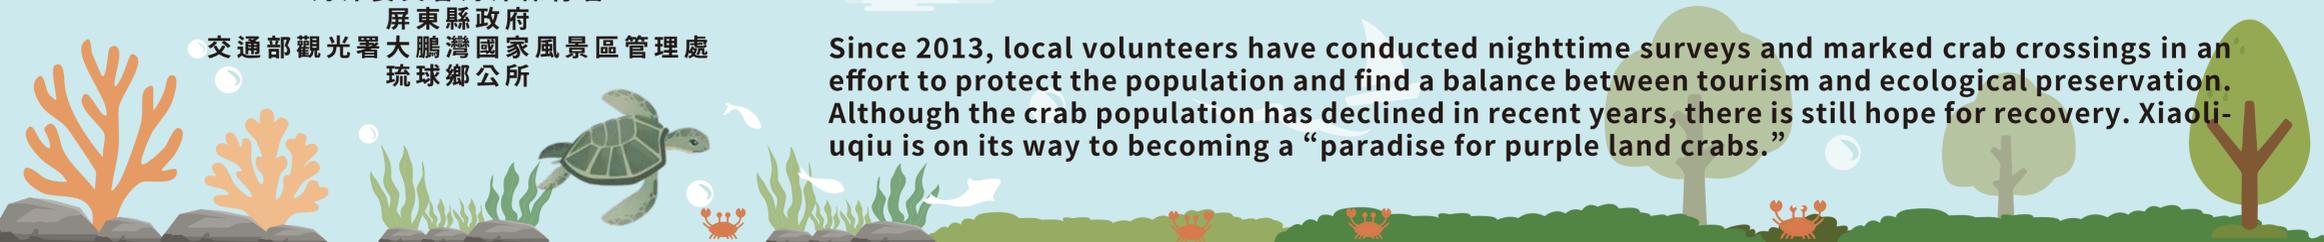

During the annual breeding season, egg-carrying female crabs migrate en masse to the sea to release their larvae. This "seaward migration" requires them to cross roads, where they often fall victim to roadkill due to heavy traffic.

Since 2013, local volunteers have conducted nighttime surveys and marked crab crossings in an effort to protect the population and find a balance between tourism and ecological preservation. Although the crab population has declined in recent years, there is still hope for recovery. Xiaoliuqiu is on its way to becoming a "paradise for purple land crabs."
